CLEAN COPY CLAIMS AND SPECIFICATION

ARTICLE ASSEMBLY

This application is a continuation of U.S. Utility Application 08/777,032, tilled on 12/30/96. The earlier filing date of this application is hereby claimed under 35 U.S.C 120.

BACKGROUND OF THE INVENTION

FIELD OF THE INVENTION

The instant invention relates generally to toothbrushes, but may also find a useful application in other types of methods differing from the type described herein. More specifically it relates to an assembly which may contain a combination of appealing qualities.

It will be understood that each of the elements described above, or two together, may also find a useful application in other types of methods differing from the type described above.

While certain novel features of this invention have been shown and described are pointed out in the annexed claims, it is not intended to be limited to the details above, since it will be understood that various omissions, modifications, substitutions and changes in the forms and details of the device illustrated and in its operation can be made by those skilled in the art without departing in any way from the sprit of the present invention.

Without further analysis, the foregoing will so fully reveal the gist of the present invention that others can, by applying current knowledge, readily adapt it for various applications without omitting features that, from the standpoint of prior art, fairly constitute essential characteristics of the generic aspects of this invention.

SUMMARY OF THE INVENTION

A first object of the present invention is to provide an assembly that will overcome the shortcomings of the prior art devices.

A second object is to provide an assembly, comprising a toothbrush having a first and second end, and a stand for receiving the second end of the brush handle therein, thereby retaining the handle in a vertical position when the stand is placed on a horizontal surface.

A third object is to provide an assembly, in which the stand is releasably connected to the toothbrush handle.

A forth object is to provide an assembly, in which the stand is a pair of feet which are positioned together to form a continuous bottom supporting surface and a single heel portion, wherein the single heel portion includes a recess for selectively receiving the second end of the toothbrush handle therein.
